SKINEER

www.skineer.net

SKINEER is a stone sheet made of real slate, marble, sandstone and quartzite. extracted using a patented process then infused with a fibreglass and fabric, giving Skineer a unique and beneficial characteristics that the original stone never had.

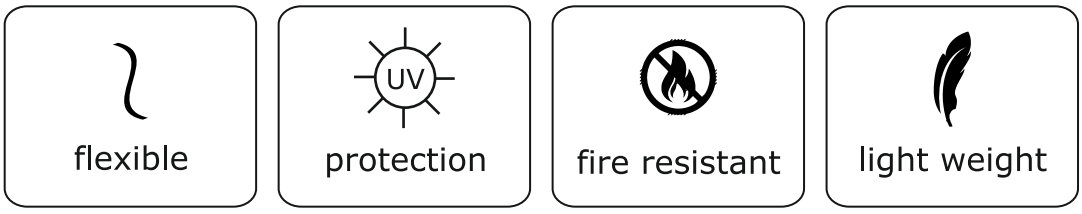

SKINEER is a composite product that has been designed to meet the growing need for quality surface finishes. Skineer behaves like any normal slate and quartzite under the elements. As such it is typically used for feature walling and ceilings, furniture, indoors or outdoor, and can also be used in water features.

INSTALLATION

SKINEER can be glued to surfaces using most standard laminate adhesives having a thick body or foaming quality. Prior to application of the glue clean, brush and de-grease the receiving surface or dust, oils or any other contaminants. In same installations, and depending upon the adhesive used, it may be necessary to prepare the back of the thin Slate Stone veneer with solvent or recommended primer by the adhesive manufacture. We recommend making a test area with any adhesive prior to final application.

RECOMMENDED TYPES OF ADHESIVES & FILLERS

- Polyester-based gap filler putties
- Epoxies
-Kerakoll
- Silicone (with primer only)
- Polyurethane wood glues
- Construction grade multi-purpose cement and adhesives
